

Introducing Verdant Thermostat Manager

Your all-in-one platform for managing energy across entire buildings. Maximize operational efficiency with intuitive remote HVAC system and temperature control. Manage energy consumption, configure alerts, and track performance across multiple properties with ease.

Available in both dark and light mode, and accessible on desktop, iOS, and Android.

In-depth energy
management settings

NEW Performance
dashboard

Revamped
user interface

OPERATIONS

Portfolio View

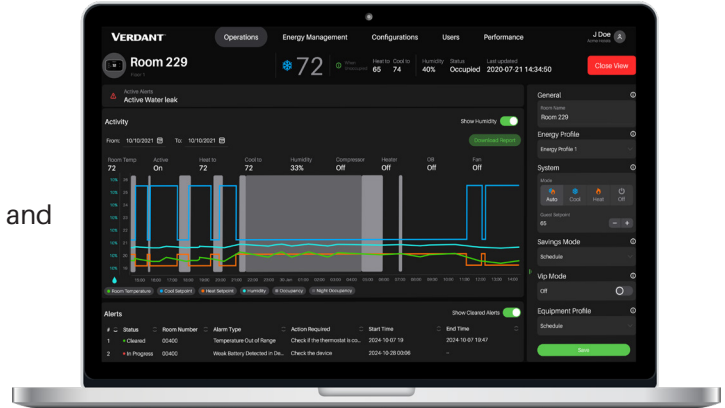

Easily manage multiple properties with an interactive map that provides high-level alerts and system summaries, offering a comprehensive overview at a glance.

Streamlined Room & Floor Management

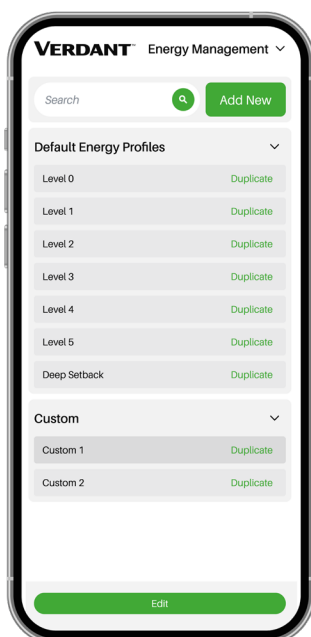

Easily check the location of each unit within a property using interactive floor plans. Update room or unit names and group them by floor—no floor plan upload required.

Multi-thermostat Control

Make bulk updates effortlessly by applying changes to multiple rooms, units, or floors simultaneously. Adjust temperature setpoints, activate VIP mode, or assign energy profiles with just a few clicks.

ENERGY MANAGEMENT

User-friendly Savings Profile

An enhanced interface makes it straightforward to define custom heating and cooling settings, helping users maximize energy savings all year-round with ease.

Advanced Customization & Control

Create multiple energy profiles and assign them to rooms in bulk. Fine-tune settings for every stage of the end-user journey—from guest arrival to stay and departure. Unlock advanced energy management features, including dead bands, temperature thresholds, humidity mitigation, recovery temperatures, and night occupancy detection, ensuring maximum efficiency without compromising comfort.

PERFORMANCE DASHBOARD

Gain a comprehensive portfolio overview with a single dashboard that lets you track performance for one or multiple properties. Monitor trends, savings, and identify areas for improvement.

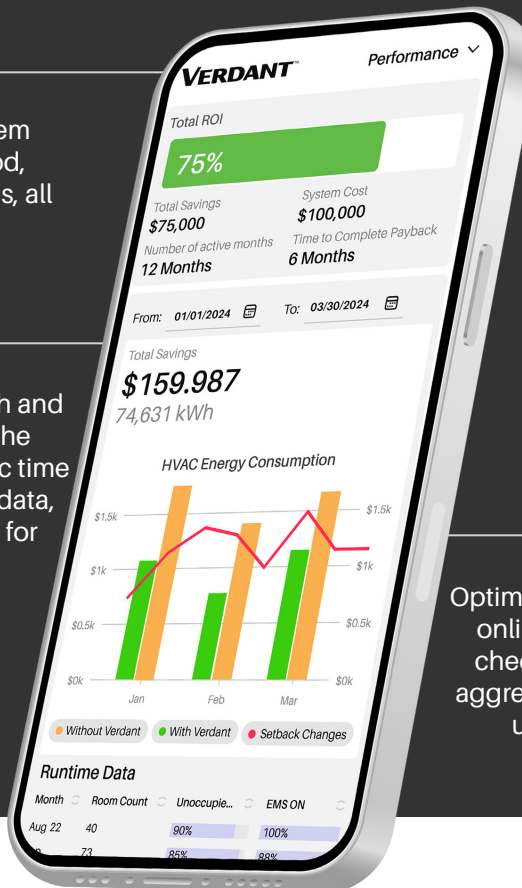

The new performance page also enables robust system health tracking through:

Financial KPIs

Track key metrics like ROI, system costs, remaining payback period, total savings, and active months, all in one centralized view.

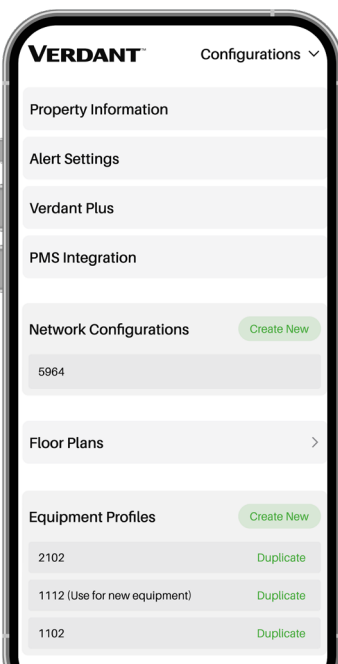

Savings Reporting

Compare month-by-month kWh and cost savings with and without the Verdant solution. Select specific time periods, access HVAC runtime data, and download detailed reports for deeper insights.

Real-time Status Data

Optimize energy savings with data on online rooms, occupied rooms, and check-ins. Thermostats adjust more aggressively when rooms or units are unrented, maximizing efficiency.

CONFIGURATION

Administrative Settings

Configure Verdant Plus alerts and PMS integration with tools exclusively available to admin users.

Floor Plan Customization

Enhance the platform's visual experience by uploading floor plans, mapping rooms to floors, and adding images for interactive navigation.

About Verdant

Trusted by thousands of hospitality, student housing, multifamily and senior living owners and operators. Verdant energy management thermostats combine smart occupancy sensors with patented software to reduce HVAC energy consumption in unoccupied spaces and achieve sustainability goals.
